

Flash Voyager

Durable

**Water
Resistant**

Drop-Tested

Durable, Water Resistant, Drop-Tested

The Corsair Flash Voyager family of USB drives is rugged, stylish, compact, and reliable, making them ideal for transporting MP3s, digital images, presentations and more. Flash Voyager drives are fully Plug and Play with most operating systems and are backward compatible with USB 1.1.

The Corsair Flash Voyager family is comprised of two outstanding products. The Flash Voyager GT is designed from the ground up for speed, optimizing transfer rates of both reads and writes, while Flash Voyager provides a durable USB drive in large capacities.

The Flash Voyager and Flash Voyager GT are enclosed in the Corsair proprietary all-rubber housing. Boasting water-resistant properties, these drives allow users to carry more valuable data and applications without compromise. Several reviews of the Flash Voyager products have demonstrated the ruggedness, durability, and reliability of the Flash Voyager family. The Flash Voyager has been shown laundered, baked, frozen, boiled, dropped, and even run over by a SUV in many third party reviews. After all the punishment it receives, the drive continues to work.

Features:

- Plug & Play functionality in Windows® Vista, XP, 2000, ME, Linux 2.4 and later, Mac OS 9, X and later
- Lanyard and USB cable
- Limited 10-year warranty

Flash Voyager

Legendary Corsair Warranty and Customer Service

Corsair stands behind the Flash Voyager product family with a 10 year (120 months) warranty. Because questions occur at all hours, on-line customer support is accessible 24/7 at www.askcorsair.com

You'll find FAQs and helpful hints from experts and other users, as well as easy directions for organizing returns if needed

Flash Voyager GT

Flash Voyager GT provides fast data transfer using performance IC-paired memory and controllers.

NOTE: The industry standard for measuring capacity on flash memory storage products (such as SD cards, USB flash drives, etc) is 1 megabyte (MB) = 1 million (1,000,000) bytes and 1 gigabyte (GB) = 1 billion (1,000,000,000) bytes. Some of the listed capacity is consumed by formatting the device and other internal device functions, and is not available for data storage. Most operating systems report device storage capacity in binary format in which 1 MB = 1,048,576 bytes and 1 GB = 1,073,741,824 bytes; therefore, an operating system will typically report the capacity of a 4GB flash device as 3.73GB (= 4,000,000,000/1,073,741,824).
